The main goal, expressed in the consultation, is the issue of the comprehensive provision of human interests, Sh. Mirziyoyev. "In order to ensure the interests of a person, one must first of all communicate with people, with the people, be well aware of their troubles, aspirations, life problems and needs," the head of state noted. "We forgot to communicate with people at the time of the postponement. Entering them and talking openly and sincerely, hearing the pain, unfortunately fell into the last place in our activity," they said.

Open dialogue with the people, lightening the burden – serves to strengthen the confidence of the population in the state and society, the president of our state noted. Communication occupies a leading place within the activities carried out by people, it satisfies the most important need in a person – his need to live in society and consider himself a person, a person. For this reason, this concept is of great importance for humans.

Communication is the result of the exchange of information between two and more people. Cooperation between people is an exchange of information and information that arises from the need for activity. The activities of people together are the process of entering into interactions with each other during their various activities that arise from their needs. That is, the work that each individual performs in society (work, study, play, creativity, etc.) include interaction and interaction shakes. In psychology, there are 2 different definitions of the concept of communication:

1) communication – the process of establishing and developing communication, which is dictated by the needs of collaborative activities;

2) communication – interaction of subjects through a system of signs.

Each person's own I is shaped in the process of communication with those around them. The person first develops in the family, kindergarten, school, in situ, workhouse, among the elderly, among a new group and communities. Most people confuse the concept of communication with the concept of communication. Communication\_ is the exchange of information between living and dead nature.

Communication is a word that is inherent only in humans. It is performed by humans through language. Language is a complex system of communication or is said to be able to learn and use this system.

The field of language acquisition is called linguistics. Languages change over time, their evolution being studied by historical linguistics, which determines what signs ancient languages have for later stages to occur, and compares them to modern languages. As a means of communication, the concept of *nutiq*, which we can say, is divided into written *nutiq* and oral speech.

There are two manifestations of oral *nutiq* *yanna*, dialogical and monological. Dialogic is a dialogue that is shared between two people. Dialogue can be on a variety of topics, mostly in question and answer form. Such communication does not choose age in any situation, psychologists can gain a lot of information as a result of the fact that even educators and people of other professions communicate with each other. I basically marry more Q & A in a child of a younger age that we should encourage them to give birth to words without needing a lagaped. We all know that a 1-year-old child will be very-very curious (tickle) *roq*. Almost all parents say some of the words to children in a vague way, which causes the child to be unable to say some of the words. For example, the pronunciation of the letter "R" as "L". The use of the dialogue method helps not only to speak *tughri*, but also to learn foreign languages. *Manalog* is basically the sum of data told by a single person. By using the *Manalog* method, it is clear that we can obtain a lot of gold-equivalent information. *Manalog* can be in any *Mavu* (family, Homeland, great thinkers, scholars, and b). By using the *Manalog* method, we can speak *burro-burro*, acquire new knowledge.

I wanted the *insituts* to have a choice of "*Manalogs*" on certain topics. Only then can we establish that the Uzbek language is not broken among students, *chroly* speaking, A.N. Leotev in his book "*psychics from progress ocherks*" covered generational communication in such a way; "if the older generation had died out, the human species would not have disappeared, but the progress of society could have disappeared, not been pushed far back". Indeed, thanks to the presence of intergenerational communication, All Society has retained its culture, wealth, values. Since communication is a complex process, as we mentioned above, great scientists, people have given different information about the concept of communication.

G.M. Andreyeva divides communication into the following types.

1) the communicative aspect of communication: it is the process of exchange of information and information between those who enter into communication. Language plays an important role in this process.

2) the interactive side of communication: the process of influencing the social behavior of each other by the parties involved in communication. This process is carried out not only through speech (language), but also through various behaviors.

3) the perceptive side of communication: the process by which the communicating parties are able to perceive each other.

In addition to these, communication can be *ramsified* or informal in tone. Formal communication is in official tasks, jobs that people perform in society.

For example, B includes the communication of the leader with his subordinates, the process of communication of the professor with the student, the treatment of the teacher with the student, etc. Informal communication is determined by the thought thoughts, intentions-goals and emotional relationships of the interlocutor, which are performed while relying on the personal attitude of this person.

There are also speech verbal and non-speech nonverbal influences on communication.

- Verbal influence is the influence that we exert through our speech and speech-the main tool in this is the word.

- Nonverbal effect-this includes the fact that the places of the

interlocutor in the phase in relation to each other, khilats, slings, facial expressions, views directly protect each other.

Now the XXI century is considered a period when technology developed. Human communication is almost decreasing. We do not ask ourselves adults, teachers from our parents when any information is needed. Hatoki, do not look for information by leafing through the book. We do not want ourselves to be tormented, sought. It's just that we prefer to use the phone. As a result, we ourselves do not notice that we are causing the disappearance of the concept of consequence among humans. A piece that looks at families, the parents are practically not communicating with their children - we will not be mistaken to say that this is one of the global problems these days. They are seen as preferring to spend their time on the internet instead of giving them time. What negative situations can arise from this to yours. Of course, the first thing that is formed is inattention, inattention, inattention. Then, some of the parents inside the quotation will rant about their children. My child does not raise his head from the internet. Man does not talk to, saying he does not pay tribute. Why did he come to this situation they can't even ask themselves questions.

Conclusion; dear High parents the first person who will be a mirror to the child will be you. It is not for nothing that the proverb "does what a bird sees in a nest" was used in our hallig. Take more time for your child he would like you to have more communication than bulan. Tugri now has no way to avoid using the internet at all, but it doesn't hurt to have everything in order.
