Annotation: This article discusses the importance and role of using modern technologies and innovative methods in teaching in primary classes.

Keywords: Primary class, lesson, modern technologies, interactive methods, teacher, students.

Exchange of ideas between teachers and students, cooperative activities, methods of using interactive methods and modern technologies during the lesson.

The teacher delivers education and training to the student through cooperation, that is, during the lesson, he delivers his knowledge, skills and training using various methods. Students will have the ability to use it as a result of mastering it. In order to achieve such an effective achievement, it is appropriate for the teacher to spend 45 minutes in such stages during the lesson.

1. Organizational period - 3 minutes.
2. Closing the topic - 5 minutes.
3. For a new topic - 15 minutes.
4. Closing the topic - 10 minutes.
5. Motivating students Evaluation of students is 10 minutes
6. Homework 2 minutes.

If we carry out these steps correctly during the lesson, we will achieve our goal, which will be effective for the students as well. In order to solve the problems of education and upbringing of students during the lesson, students should work independently and conduct extracurricular activities. Nowadays, due to the wide spread of modern technologies, great responsibility and demands are placed on teachers and students, and this is one of the main requirements - the effectiveness of the lesson, its quality, students' knowledge and skills, various educational activities at school, their organization, and through it, students' various knowledge and skills. it is not for nothing that they master their skills. Without hesitation, we can say that today the role of innovative technologies, technical tools, main computers in the correct and effective organization of the educational process is incomparable.

The teacher's use of multimedia, animation, graphics, slide films and video films related to the topic during the lesson helps to make the lesson process more interesting. For this, the teacher should always prepare for the lesson, set a goal for each lesson and ask himself the question "how can I enter today's lesson with something new and make the lesson interesting?" must Then we can say that, having achieved the goal, the students will be educated and educated. It is not wrong to say that children of today's age are smarter than us. Due to the fact that we can achieve such achievements, today the development of modern technologies, in which students are able to learn independently and think, analyze, and even draw the final conclusions themselves. In the previous educational system, in

traditional education, students were taught only to acquire ready-made knowledge. Today, the interest in using interactive methods and information technologies in the educational process is increasing day by day. Today, most primary school students acquire computer literacy before entering school.

They learn how to play various games on the computer and how to use computer parts from the age of kindergarten. Based on this situation, we can say that our country is developed, but we cannot say that these technologies are safe for human life. With the use of modern technologies, I teach "Brainstorming", "6×6×6", "Thoughtstorming", "Networks" method, "Squinain", "BBB", "Fifth plus", "Debate-debate", "Rolli- we can use interactive methods such as game", "FSMU", "Working in small groups", "Snowball", "Zig-zag", "I will say the last word", "Sunflower", "Chain", "Crossword".

During the lesson, if we use these games to repeat and reinforce tasks, it will give a positive result. When choosing which of the game assignments, we can choose depending on the type and topic of the lesson. The level of students' familiarity with games and tasks, their level of knowledge, opportunities for independent creative work, and the ability to quickly recall what they have learned should also depend on the level of creativity. For this reason, today teachers are required to use modern technologies. Judging from the above, based on our experience, using interactive methods in classes gives effective results in education. Since children are very young in elementary school, they become addicted to play. That's why we can provide education and training through games. At such a time, it is natural for a child to become the tone of reading and playing. It is very important to make them interested in reading. What is the importance of modern technologies in teaching primary school students? We can answer this question without hesitation with these examples.

- Videos,
- Visual aids,
- Game technology,
- Various programs, educational programs should be colorful and innovative.

The use of these technologies in the course of the lesson provides an opportunity to make the student interested in the lesson and conduct a lesson worthy of the times.

In the world practice of using information and communication technologies in the educational process, it should be widely approached from pedagogical, psychological, didactic, organizational, economic, social, ecological and other points of view. The lesson process is a complex creative activity. The effectiveness and success of the lesson depends on the students.

The conclusion is that nowadays modern technologies are very important in human life, and without them, the growth and development of our country will slow down, only if we can use them in the right way.
