ANNOTATION

This article discusses science-based facts about left handed, celebrities who are left handed, achievements based on left handed, and whether left handed in the education system needs to be fixed or left as it is. the question is answered.

Key words: left handed, right hemisphere, left hemisphere, activity, student, teacher, , process, achievements.

Most people use their right hand to perform actions, there are also people who use their left hand in basic movements. We call them left handed. Left handed depends on heredity according to sources. That is, it is passed from generation to generation. During the development of the human brain, functions are divided between the left and right hemispheres. The left hemisphere of the brain is responsible for speech, reading, writing, calculation, analytical complex forms, and the right hemisphere is responsible for concrete image activity (the appearance, sound, color of things in the external world, etc. determine by) falls. At the same time, our left hemisphere performs the movement of our right arm and right leg, and our right hemisphere performs the movement of our left arm and left leg. Therefore, in right-handed people, the left hemisphere is more active than the right, and in left-handed people, the right hemisphere is more active than the left.

Usually we don't have a problem distinguishing between right handed and left handed people, because it becomes clear in work activities, but every there are also those who can perform activities in both hands. In such people, both hemispheres are developed together, which is considered normal. According to statistics, one out of every 10 people in the world is a left handed person. The Netherlands is the region in the world with the largest number of left handeds, while the least common regions are Japan and China. So, based on these data, left handed depends on the external environment and the region where one lives.

In the teaching process of education system, special attention should be paid to the left handed students, because putting left handed students on the same desk with right-handed students causes discomfort for both students. produces, that is, they can Inconvenience each other and conflict between them when writing. The teacher, especially the elementary teacher, should be very clever in this process. Pupils admitted to the 1st grade must first be studied psychologically and physiologically. Then there will be no mistake in placing which student at which desk. If there is a left handed student among the students, move this student to the left of the desk should be placed on the side.

Left handed is not a disease or a defect. But in ancient times, due to the influence of beliefs and social superstitions, the lack of knowledge connected the left handed with evil. Such cases can be met even today. "Injustice" against left handed still exists in many countries. Thus, in the Republic of Ghana, it is forbidden for any person to claim the throne. In some countries, very cruel methods have been introduced to teach a person to use only his right hand. These admonitions can also influence the student to start writing with the right hand. But one day it will go back to the left hand, so it is wrong to think of people who write with the left hand as having a defect. Learning to be right-handed can have a negative effect on the student's psyche, and can lead to serious problems such as impaired speech and ugly handwriting.

A left-handed student who always falls behind it will not happen, but such students

can achieve various achievements through this laziness. An example of this is boxing or football. Left handeds will be competitive. In both of these sports, when attacking the opposing team, if the opposing team consists of right handed, they are only adapted to the right-hand shot, and if the left handed use it to shoot, the opposing team cannot respond to this shot. Left handeds type faster on computer keyboards than right handrds. This is because the most frequently used letters are mostly on the left side of the keyboard. Therefore, it is necessary to develop this feature correctly, rather than to transfer left handed students to the right hand. It is the achievement of a primary school teacher to be able to study his interests and direct them to one area.

Left handeds mostly choose artistry, painting, and writing as professions. Also, left hands are especially valued in boxing and fencing. In order for these statements to be proven, it is permissible to cite the following information. Queen Elizabeth II, Prince Charles, and Prince William of the British Royal Family have been observed to have left handed. Napoleon Bonaparte, Mahatma Gandhi, Gaius Julius Caesar, Alexander the Great, Tiberius, Joan of Arc, Charlemagne, Otto Bismarck, Benjamin Franklin, Ronald Reagan, George W. Bush, Bill Clinton, Fidel Castro, Benjamin Netanyahu, Colin Powell, Albert Gore , Queen Victoria, Barak Obama and other great people have also attended.

In conclusion, instead of spending time on teaching a left-handed student, we can use this trait and direct him to the right field. he can achieve more than he expected, find his place in society and contribute to the development of our country.
